

State of Louisiana

Louisiana Department of Health Office of Public Health

June 30, 2017

To all interested parties:

The attached list is a compilation of all Louisiana public water systems (PWS), which had violations of drinking water regulations in 2016. They are listed by parish and include the public water system identification (PWS ID), name of the supply, a description of the type of violation and the date of violation and are separated into community systems which serve homes and non-community systems which provide water to stores, schools, factories, rest areas, etc. A public water supply is one that serves 25 or more people or has 15 or more service connections for 60 or more days per year. There were 1374 regulated water systems during 2016, of which 1007 were community and 367 were non-community water systems. In 2016, 601 water systems (community [C] – 465 & non-community [N] – 136) had 3515 total violations (C–2932 & N–465). These violations fall into three major categories:

- a) **Maximum Contaminant Level violation:** Under the Safe Drinking Water Act (SDWA), the United States Environmental Protection Agency (EPA) sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs).
- b) **Treatment Technique violation:** For some regulations, the EPA establishes treatment techniques in lieu of a MCL to control unacceptable levels of certain contaminants. For example, treatment techniques have been established for viruses, bacteria, turbidity and lead.
- c) **Monitoring & Reporting violations:** A PWS is required to monitor and verify on a regular schedule that the levels of contaminants present in the water do not exceed the MCL. If a sample is not collected and analyzed, a monitoring violation occurs. A reporting violation also includes failure to report test results correctly to the state or to notify water system customers of a violation in a timely or appropriate manner.

A separate table summarizing the 2016 violations in these three categories is included with this report; however this table only shows those federal violations considered “major” within the three categories. Thus the violation counts may not agree with the list totals discussed in this report which includes all federal and state violations for 2016.

On April 1, 2016, the *Revised Total Coliform Rule* (RTCR) became effective, replacing the previous *Total Coliform Rule* (TCR). The intent of the RTCR is to increase public health protection through the reduction of potential pathways of entry for fecal contamination into distribution systems. The RTCR establishes a maximum contaminant level (MCL) for E. coli and uses E. coli and total coliforms to initiate a “find and fix” approach to address fecal contamination that could enter into the distribution system. It requires public water systems (PWSs) to perform assessments to identify sanitary defects and subsequently take action to correct them. Because the RTCR became effective after the first quarter of 2016, this report will include violations cited for both the TCR and the RTCR. All Public Water Systems in Louisiana are required to be monitored for coliform bacteria every month. Although

Engineering Services

coliform bacteria are found throughout the environment and can enter drinking water by various mechanisms, they are primarily associated with sewage and the intestinal tract of mammals and are used as an indicator of potential health-related contamination of drinking water. Under TCR, if the presence of coliform is confirmed, the system may be in violation and may be required to notify its customers of and take action to correct the problem(s). This violation appears in this report as “MCL (TCR), MONTHLY - COLIFORM (TCR)”. For the first quarter of 2016, there was only one system (C-0 & N-1) with one violation (C-0 & N-1) for the total coliform MCL monthly violation. RTCR replaced the total coliform MCL monthly violation with the Level 1 Assessment requirement triggered by multiple coliform-positive samples or failure to collect follow-up samples. If the presence of coliform bacteria triggers a Level 1 Assessment and a system fails to conduct or performs an inadequate Level 1 Assessment, a violation of type “LEVEL 1 ASSESS, TC POS RT NO RPT (RTCR)” or “LEVEL 1 ASSESS, MULTIPLE TC POS (RTCR)” will be noted. In 2016 there were thirteen such violations (C-9 & N-4) with thirteen systems in violation (C-9 & N-4). “Major” refers to a failure to collect any samples. There were also a few minor bacteriological monitoring violations.

A violation for fecal coliform bacteria (specifically *E. coli*), which is more directly related to human or animal waste, is indicated in this report as “MCL, E. COLI, POS E COLI (RTCR)”. Due to the health concerns, this is an acute violation and requires immediate public notification. Louisiana had only three acute *E. coli* violations (C-3 & N-0) with three systems in violation (C-3 & N-0). Excluding the acute violations, the notification of customers always comes after the violation occurred. The intent of the notice is to inform the customers of the potential health risk and to motivate the water systems to undertake actions that will prevent a reoccurrence of the problem.

During 2016 in Louisiana the individual water systems were responsible for collecting the bacteriological samples. If all the required samples were not collected, sampling violations were issued and the systems were required to notify their customers. Louisiana’s public water systems were issued initial (“ROUTINE”) and follow-up (“REPEAT”) bacteriological sampling violations in 2016. Initial refers to the first round of sampling and follow-up refers any subsequent confirmation sampling. The report contains, under the superseded TCR, 47 “MONITORING (TCR), ROUTINE MAJOR” violations (C-31 & N-16) with 41 systems in violation (C-25 & N-16), and one “MONITORING (TCR), REPEAT MAJOR” violation (C-1 & N-0) with one system in violation (C-1 & N-0). Under the RTCR, the report contains 195 “MONITORING, ROUTINE, MAJOR (RTCR)” violations (C-67 & N-128) with 95 systems in violation (C-40 & N-55).

Additionally, public water systems that use groundwater as their source are required to monitor their source water (wells) for bacteriological contaminants if coliform bacteria are found during routine bacteriological sampling. Fourteen water systems (C-10 & N-4) with a combined 27 violations (C-19 & N-8) failed to complete this monitoring.

Violations containing the terms “SWTR”, “TURBIDITY”, “IESWTR” or “LT2ESWTR” are issued to public water systems, using surface water (lakes, rivers and streams) as their source, that are unable to produce water with a low enough turbidity or fail to monitor turbidity at the required frequency. Turbidity is the measure of the amount of suspended material (cloudiness) in the water. During the report year there were 57 regulated surface water systems in Louisiana, and two monitoring violations (C-1 & N-1) occurred with two systems in violation (C-1 & N-1), and six treatment technique violations (C-5 & N-1) occurred with four systems in violation (C-3 & N-1). These violations normally occur in the winter and are associated with the increased difficulty of treating surface waters during colder months. This notification also comes after the violation.

During 2016 in Louisiana, most of the chemical sampling (excluding lead & copper, disinfectants and disinfection-by-products) was collected by Office of Public Health staff. Samples to check for numerous inorganic, organic and radiological compounds are routinely collected and analyzed. If levels of these analytes are found to be above the MCL set by the EPA, a MCL violation is issued or, if samples are not collected in a timely manner, a monitoring violation is issued. There were 10 MCL violations issued for arsenic (C-8 & N-2) with three systems in violation (C-2 & N-1). Arsenic is a metal found in some ground water.

In Louisiana all public water systems are required to maintain an adequate level of disinfectant, indicated in this report as “CHLORINE” or “CHLORAMINE”, in their water system to kill potentially disease-causing microorganisms and are issued violations if they fail to maintain a protective level “INADEQUATE MIN CHLORINE RESIDUAL”. In 2016, there were 160 inadequate chlorine residual violations (C-135 & N-25) with 85 systems in violation (C-68 & N-17).

Public water systems are also required to test their water for disinfection by-products. Surface water systems are additionally required to test for disinfectant by-product precursors known as Total Organic Carbon (TOC). Total Trihalomethanes (TTHMs), Total Haloacetic Acids (HAA5) and Chlorite are disinfection by-products (DBPs) potentially formed by disinfectants used to treat drinking water. Prior to 2004, only large systems were required to monitor for TTHMs but per the Stage 1 and Stage 2 Disinfectants and Disinfection By-products Rules (DBPR) all community and non-transient non-community water systems are required to monitor TTHMs, HAA5 and Chlorite (if chlorine dioxide is used). For Stage 1 DBPR, there was one violation (C-1 & N-0) of the MCL (Average) for chlorite with one system in violation (C-1 & N-0). Also, there were eight violations (C-8 & N-0) for inadequate disinfection by-product precursor removal with four systems in violation (C-4 & N-0). For Stage 2 DBPR, there were 509 violations (C-495 & N-14) of the MCL (LRAA) for TTHMs with 101 systems in violation (C-98 & N-3), and 112 violations (C-111 & N-1) of the MCL (LRAA) for HAA5 with 31 systems in violation (C-30 & N-1). For failing to monitor for TTHMs-HAA5, 163 violations (C-147 & N-16) with 127 systems in violation (C-114 & N-13) were issued.

Public water systems may use alternative disinfectants to reduce the formation of TTHM-HAA5 and other compounds that can cause taste and odor issues in drinking water. Chlorine dioxide is an approved alternative disinfectant for drinking water, but EPA has set a maximum residual disinfectant level (MRDL) and requires routine monitoring for chlorine dioxide due to adverse health effects that can occur at levels above the MRDL. For 2016, there were seven violations (C-7 & N-0) of the chlorine dioxide MRDL for three systems (C-3 & N-0).

Per the Lead and Copper Rule (LCR), all community water systems and non-transient non-community water systems are required to monitor drinking water for lead and copper at their customer's taps. For lead and copper, EPA set Action Levels (AL) and requires systems to take additional actions when more than 10 percent of the samples exceed the AL for lead and/or copper. Required additional actions includes increased lead and copper monitoring, consumer notification of results, public education (for lead exceedances only), water quality monitoring and implementation of corrosion control treatment. There were 4 water systems (C-3 & N-1) issued a combined 10 LCR monitoring violations (C-9 & N-1) for failing to collect their initial set of routine lead and copper tap samples. There were 52 water systems (C-43 & N-9) issued a combined 101 LCR monitoring violations (C-92 & N-9) for failing to collect routine lead and copper tap samples. There were 4 water systems (C-3 & N-1) issued a combined 4 LCR monitoring violations (C-3 & N-1) for failing to collect water

quality parameters. There was 1 community water system (C-1 & N-0) issued a combined 3 LCR monitoring violations (C-3 & N-0) for failing to collect source lead and copper samples. There was 1 community water system (C-1 & N-0) issued a LCR reporting violation for failing to submit a corrosion control (CCT) recommendation/study. There were 2 community water systems (C-2 & N-0) issued LCR reporting violations for failing to distribute public education. There were 74 water systems (C-66 & N-8) issued a combined 74 LCR reporting violations (C-66 & N-8) for failing to distribute lead consumer notices.

This report is an effort by the Louisiana Department of Health to provide the general public with additional information regarding the quality of their drinking water. This report is a follow-up to earlier reports dating back to 1996. There was an overall decrease in the number of violations issued since 2014. LDH continues to focus efforts on disinfection by-product control and ensure adequate monitoring of drinking water to protect public health. Public water systems are challenged with meeting the tighter requirements of the new Disinfection By-products Rule (Stage 2) while maintaining adequate disinfectant residual in the water system to control the amoeba, *Naegleria fowleri*, which has been detected so far in seven public water systems in Louisiana. A report on the violations for 2017 will be issued in the summer of 2018. Additionally, each water system produces an annual Consumer Confidence Reports which provides detailed information about chemical sampling results and drinking water violations. This and other information drinking water information is available on EPA's internet site and will be available on the health department's internet site. A summary form developed by EPA with violation total and definitions is available upon request.

If you have any additional questions, please feel free to call or write.
